

UNO C2

Corded Meets Cordless

With Bittel's unique UNO C2 options, you get the best of both worlds. Inside a corded phone lives a cordless base station, supporting up to four cordless handsets. So, with just one phone jack per room, you can still support both a need for a corded and cordless phone in the same room.

The corded handset by the bed is always there and ready, and the cordless remote handset can be placed anywhere there's an AC outlet.

UNO C2: Features

Automatic Handset Synchronization

Handsets automatically synchronize with the base simply by placing handset on base and charging.

Moisture- and Spill-Resistant Acrylic Face

Our available acrylic overlay effectively seals against moisture and spills to better protect against damage.

Battery Hibernation Mode

Factory-installed battery makes installation a snap. Handset “wakes up” upon powering.

Dynamic Transmit Power

Handset adjusts transmit power depending on distance to base, extending battery life.

Multiple Remote Handset Support

Base support up to seven (7) remote handsets.

Streamlined Power & Line Cord Integration

Power and phone line(s) are combined in one cable to the phone, eliminating tangled-cable mess.

Available Hassle-Free Faceplate

EZ-Fit faceplates insert easily without the need for a plastic overlay. Universal template saves time and money on maintenance and replacements.

ProGard™ Keyboard

Our unique internal keyboard design provides far greater reliability than conventional designs.
